1. Executive Summary

Guruvayur Dham is a comprehensive digital platform for a luxury pilgrim hotel in Mathura, Uttar Pradesh, located opposite Mata Pathwari Mandir in Natwar Nagar, Dholi Pyau. Built on Next.js 16 with a PostgreSQL database, the platform serves as a complete hotel management system, content management system (CMS), pilgrim assistant, and SEO-driven marketing engine all in one.

This document provides an in-depth analysis of every feature built into the platform, the SEO reach across 23+ pages, the technology stack, deployment infrastructure, and operational capabilities. The platform has been designed with a pilgrim-first approach, understanding that devotees visiting Mathura need not just a room, but a spiritual companion that coordinates darshan timings, pooja bookings, festival planning, and temple visits.

1.1 Platform at a Glance

Metric	Value
Total Pages	23+ (10 core + 13 SEO landing pages)
Languages Supported	5 (English, Hindi, Marathi, Gujarati, Malayalam)
CMS Content Blocks	70+ editable text/image fields
Database Models	40+ Prisma models
API Endpoints	50+ REST API routes
SEO Landing Pages	13 (5 festivals + 4 hotels-near + 4 darshan-timings)
Total SEO Content	11,108 words across landing pages
Estimated Monthly Search Reach	750,000+ searches
Deployment Targets	Vercel (production) + any VPS via Docker
Cron Jobs	1 (post-stay review funnel, daily)

1.2 Technology Stack

The platform is built on a modern, production-grade technology stack designed for performance, scalability, and maintainability:

Layer	Technology	Purpose
Frontend	Next.js 16 + React 19	Server-rendered SPA with hash routing
Styling	Tailwind CSS + shadcn/ui	Responsive design + component library
Animations	Framer Motion	Page transitions, scroll reveals, micro-interactions
Backend	Next.js API Routes	50+ REST endpoints for all business logic
Database	PostgreSQL (Neon)	Hosted Postgres with 40+ Prisma models
ORM	Prisma 6	Type-safe database access + migrations
Auth	NextAuth + OAuth	Email/password, OTP, PIN, Google, Facebook
Payments	Razorpay	Room bookings + pooja payments
AI Chatbot	Groq (LLaMA 3.3) + z-ai fallback	WhatsApp bot + website chat widget
Storage	Vercel Blob + local fallback	Image uploads for CMS
Deployment	Vercel + Docker (VPS-ready)	Auto-deploy from GitHub + self-hosted
Cron	Vercel Cron	Daily review funnel automation
Monitoring	Built-in analytics + web vitals	Core Web Vitals tracking + event logging

2. Pages & Content Architecture

The platform features 23+ pages organized into three tiers: core pages (the main hotel website), SEO landing pages (designed to capture search traffic for high-intent pilgrim queries), and administrative pages (CMS, dashboard, settings). Every page is connected via a hash-based router and fully integrated with the CMS for instant content updates.

2.1 Core Pages (10)

These are the primary pages of the hotel website. Each is fully CMS-driven, meaning all text, images, and data can be edited through the admin dashboard without touching code.

Page	Route	Purpose
Home	/#/	Landing page with hero, rooms preview, pooja, testimonials, blog, FAQ
Rooms	/#/rooms	Filterable room grid (type, budget, occupancy) with live availability
Room Detail	/#/rooms/[slug]	Full room info, gallery, amenities, availability calendar
Pooja	/#/pooja	Temple pooja booking (Palpayasam, Abhishek, Aarti, etc.)
About	/#/about	Family-run pilgrim home story since 1998
Gallery	/#/gallery	Masonry photo gallery (Rooms, Temple, Facilities, Surroundings)
Events	/#/events	Festival calendar (Janmashtami, Holi, Diwali, etc.)
Blog	/#/blog	Travel guide articles + darshan timing guides
FAQ	/#/faq	14 most-asked questions with FAQPage schema
Contact	/#/contact	WhatsApp form + contact info + Google Maps embed

2.2 SEO Landing Pages (13)

These are purpose-built pages designed to capture high-intent search traffic from pilgrims planning their Mathura visit. Each page has 800+ words of SEO-optimized content, JSON-LD structured data, FAQ accordion, and a booking CTA. The combined monthly search reach is estimated at 750,000+ searches.

2.2.1 Festival Pages (5)

Page	Slug	Est. Monthly Searches	JSON-LD Schema
Janmashtami	/#/janmashtami	~450,000 (seasonal spike)	Event
Holi in Mathura	/#/holi-in-mathura	~200,000 (seasonal spike)	Event
Diwali in Mathura	/#/diwali-in-mathura	~150,000 (seasonal spike)	Event
Radhashtami	/#/radhashtami	~50,000	Event
Kartik Purnima	/#/kartik-purnima	~40,000	Event

2.2.2 Hotels Near Pages (4)

These pages target bottom-of-funnel searches: pilgrims who have decided which temple to visit and now need a room nearby. Conversion rates on these pages are very high.

Page	Slug	Est. Monthly Searches	JSON-LD Schema
Near Banke Bihari (Vrindavan)	/#/hotels-near-banke-bihari-vrindavan	~12,000	TouristAttraction
Near Krishna Janmabhoomi	/#/hotels-near-krishna-janmabhoomi	~8,000	TouristAttraction
Near Dwarkadhish Temple	/#/hotels-near-dwarkadhish-temple	~5,000	TouristAttraction
Near Mata Pathwari Mandir	/#/hotels-near-mata-pathwari-mandir	~3,000 (low competition)	TouristAttraction

2.2.3 Darshan Timing Pages (4)

Evergreen content pages targeting pilgrims searching for temple timings. These position the hotel as the local authority and naturally drive bookings.

Page	Slug	Est. Monthly Searches	JSON-LD Schema
Krishna Janmabhoomi Timings	/#/krishna-janmabhoomi-darshan-timings	~15,000	TouristAttraction + FAQPage
Banke Bihari Timings	/#/banke-bihari-darshan-timings	~18,000	TouristAttraction + FAQPage
Dwarkadhish Temple Timings	/#/dwarkadhish-temple-timings	~8,000	TouristAttraction + FAQPage

Page	Slug	Est. Monthly Searches	JSON-LD Schema
Complete Temple Guide	/#/mathura-temple-darshan-guide	~6,000	TouristAttraction + FAQPage

2.2.4 Each SEO Page Contains

- **3-paragraph introduction** (500+ words) - main SEO content targeting primary keywords
- **3 content sections** (300+ words each) - guide, tips, logistics, or temple-specific information
- **5 FAQs** with FAQPage JSON-LD schema - Google can show these as expandable rich results
- **Hero image** - full-width background image (editable via CMS)
- **Booking CTA sidebar** - sticky sidebar with WhatsApp + View Rooms buttons
- **Related pages sidebar** - links to other pages in the same category
- **Meta description** - 120-160 characters, optimized for Google search snippets
- **Breadcrumbs** - Home > Category > Page (for navigation + SEO)
- **Bottom CTA** - full-width call-to-action section with WhatsApp + room booking

3. Content Management System (CMS)

The platform includes a full-featured CMS that allows non-technical staff to edit every piece of text and every image on the website without touching code. The CMS is organized into two editors: a content block editor (for section text like headlines, subtitles, contact info) and a structured data editor (for lists like rooms, events, FAQs, testimonials, poojas, blog posts, and SEO pages).

3.1 Content Block Editor (/admin/content)

The content block editor manages 70+ editable text and image fields organized into 16 categories. Changes go live instantly after saving. The editor supports search, category filtering, and unsaved change indicators.

Category	Editable Fields	Example Keys
Site Settings	Name, tagline, phone, email, address, rating, room count	site.name, site.phone, site.email
Hero Section	Eyebrow, headline, highlight, subheadline, background image	hero.eyebrow, hero.bgImage
Why Choose Us	Eyebrow, title, subtitle	whyChooseUs.eyebrow
Rooms Section	Eyebrow, title, subtitle	rooms.eyebrow
Pooja Section	Eyebrow, title, subtitle	pooja.eyebrow
About Section	Eyebrow, title, 3-paragraph story	about.story
Contact Section	Eyebrow, title, subtitle, phone, WhatsApp, email, maps	contact.phone, contact.mapEmbed
Events Section	Eyebrow, title, subtitle	events.eyebrow
Blog Section	Eyebrow, title, subtitle	blog.eyebrow
Testimonials	Eyebrow, title, subtitle	testimonials.eyebrow
FAQ Section	Eyebrow, title, subtitle	faq.eyebrow
Gallery Section	Eyebrow, title, subtitle	gallery.eyebrow
Plan Your Darshan	Eyebrow, title, subtitle, cards (JSON)	darshan.cards
Login Page	Background image, logo	login.bgImage
Reviews Funnel	Google Reviews link, enabled toggle, hours delay	reviews.googleLink
Footer	CTA headline, CTA subtitle, tagline, socials, made-by	footer.ctaHeadline

3.2 Structured Data Editor (/admin/cms)

The structured data editor manages list-based content. It has 11 tabs, each with full CRUD (create, read, update, delete) operations. All changes go live instantly.

Tab	Data Type	Editable Fields	CMS Storage
Rooms	Room listings	Name, slug, type, price, capacity, image, gallery, amenities, description	Prisma Room model
Poojas	Temple offerings	Name, price, duration, description, prasadam, image, significance	Prisma Pooja model
Gallery	Photo gallery	Tab, src, alt, caption, span (tall/wide), sort order	Prisma GalleryImage model
Carousel	Hero slides	Title, subtitle, image, CTA text, CTA link	Prisma CarouselSlide model
Why Us	Feature cards	Icon, title, description	Prisma Feature model
Events	Festival calendar	Name, date, highlight, image, description	Prisma Event model
Reviews	Guest testimonials	Name, city, rating, room, review text	Prisma Testimonial model
FAQs	Q&A list	Question, answer	Prisma FAQItem model
Badges	Trust badges	Icon, text	Prisma TrustBadge model
Blog	Articles	Title, slug, excerpt, category, date, image, multi-paragraph content	Prisma BlogPost model
SEO Pages	All 13 landing pages	Title, meta description, eyebrow, hero image, intro, sections, FAQs	ContentBlock (JSON)

3.3 Image Upload System

The CMS includes an integrated image upload system that works across all editors. When a user uploads an image, it is stored via Vercel Blob (cloud storage, persistent across deploys) if the BLOB_READ_WRITE_TOKEN environment variable is set. Otherwise, it falls back to local filesystem storage at /public/uploads/ (persistent on VPS, ephemeral on Vercel serverless).

- Supported formats: JPEG, PNG, WebP, GIF, AVIF
- Maximum file size: 10 MB
- Auto-generates unique filenames (timestamp + random suffix)

- Validates file type server-side for security
- Returns public URL immediately for instant preview

4. Booking & Revenue System

The platform includes a complete hotel booking system with dynamic pricing, coupon support, early-bird discounts, multi-channel inventory sync, and automated post-stay follow-up. The booking flow is designed to be completed in under 30 seconds via WhatsApp, matching the pilgrim-friendly approach of the hotel.

4.1 Guest Booking Flow

The guest booking page (/#/book) implements a 4-step wizard:

Step	Title	What Happens
1	Dates & Room	Guest selects check-in/out dates + room type. Live availability shown. Dynamic price calculated.
2	Guest Details	Name, phone, email, number of guests, darshan slot preference (optional).
3	Coupon & Payment	Optional coupon code. Early-bird auto-applied if eligible. Razorpay payment or pay-on-arrival.
4	Confirmation	Booking reference (GD-XXXXXX) generated. WhatsApp confirmation sent. Reminders scheduled.

4.2 Dynamic Pricing Engine

The pricing engine calculates room rates based on multiple factors, ensuring optimal revenue during peak seasons while remaining competitive during off-peak periods:

- **Base price** - Per-room nightly rate from the Room record
- **Weekend surge** - 20-30% increase on Fridays and Saturdays
- **Festival surge** - Configurable multiplier for festival dates (Janmashtami, Holi, etc.)
- **Early-bird discount** - 15% off for bookings made 30+ days in advance
- **Last-minute pricing** - 10% discount for same-day bookings (if rooms available)
- **Coupon support** - Percentage or flat-amount coupons with usage limits and validity windows
- **Per-night breakdown** - Each night priced independently based on its specific date rules

4.3 Channel Manager Auto-Sync

When a booking is made (direct, walk-in, or from an OTA), the platform automatically broadcasts a BLOCK signal to all other connected channel partners (Booking.com, MakeMyTrip, Goibibo, Agoda). This prevents double-bookings across channels. Each channel partner has a dedicated webhook endpoint:

Channel	Webhook URL	Authentication
Booking.com	/api/channel-webhook/BOOKING_COM	X-Channel-Key header
MakeMyTrip	/api/channel-webhook/MAKEMYTRIP	X-Channel-Key header
Goibibo	/api/channel-webhook/GOIBIBO	X-Channel-Key header
Agoda	/api/channel-webhook/AGODA	X-Channel-Key header

Each webhook endpoint also has a GET health check that returns the channel connection status, last sync time, total bookings, and setup instructions for the partner dashboard. The sync logic is centralized in `/lib/channel-sync.ts` for reuse across all booking entry points.

5. WhatsApp Chatbot

The platform features a floating WhatsApp chat widget on every page (except the login page). The bot uses intent recognition for common pilgrim queries and falls back to AI (Groq LLaMA 3.3) for general questions. It also includes a production-ready webhook for real WhatsApp Business API integration.

5.1 Website Chat Widget

- **Floating green button** - Bottom-right of every page, with pulse animation
- **Auto-open** - Opens after 8 seconds on first visit (once per session)
- **Quick-reply chips** - "Book a room", "Pooja list", "Darshan timings", "Check-in time", "Festival dates"
- **Typing indicator** - Animated dots while bot processes the response
- **Unread badge** - Red counter on the button when chat is closed and bot has replied
- **Chat history** - Persisted in localStorage so returning guests see their previous messages
- **Mobile responsive** - Full-screen chat on mobile, floating window on desktop

5.2 Intent Recognition

The bot recognizes the following intents without AI (instant response, zero cost):

Intent	Trigger Keywords	Response
Greeting	hi, hello, hey, namaskaram, namaste	Welcome message with help options
Booking	book, room, availability, reserve	Room list + booking link + instructions
Pooja	pooja, aarti, abhishek, bhog, offering	Pooja list + prices + booking link
Darshan	darshan, timing, temple time	Temple timings for all major Mathura temples
Festival	festival, janmashtami, holi, diwali	Festival calendar + booking advice
Check-in/out	check-in, check-out, time	Timings + early/late options + pricing
Directions	reach, how, direction, airport, train	Address + transport options + pickup info
Dress code	dress, code, mundu, saree, wear	Temple dress code for men and women

Intent	Trigger Keywords	Response
Booking status	my booking, status, reference	Looks up booking by phone number
AI fallback	Anything else	AI generates a contextual response

5.3 WhatsApp Business API Integration

For real WhatsApp messaging (not just the website widget), the platform includes a production-ready webhook endpoint at `/api/whatsapp/webhook`. This handles Meta WhatsApp Business API webhook verification (GET) and incoming message processing (POST).

- **Webhook verification** - Handles Meta hub.challenge verification on setup
- **Message processing** - Parses incoming WhatsApp messages and routes to intent handler
- **Reply via Graph API** - Sends responses via Meta Graph API (v18.0)
- **Conversation logging** - All conversations logged in the Notifications table
- **Environment variables** - WHATSAPP_VERIFY_TOKEN, WHATSAPP_PHONE_NUMBER_ID, WHATSAPP_ACCESS_TOKEN
- **Graceful degradation** - If env vars are not set, bot works in dev mode (logs to console)

6. Post-Stay Review Funnel

The post-stay review funnel is an automated system that sends a Google Reviews request to guests 2 hours after they check out. This is the single highest-ROI feature for improving the hotel Google ranking, as more positive reviews directly translate to higher search visibility and more direct bookings (reducing OTA commission costs).

6.1 How It Works

- **Step 1:** Guest checks out at 11:00 AM IST
- **Step 2:** At 1:00 PM IST (2 hours later), the cron job runs (daily via Vercel Cron at 7:30 AM UTC)
- **Step 3:** System finds all bookings that checked out in the target window
- **Step 4:** Creates a ReviewRequest record (status: PENDING)
- **Step 5:** Sends a personalized WhatsApp message with the Google Reviews link
- **Step 6:** Marks the ReviewRequest as SENT
- **Step 7:** Guest clicks link, leaves a review on Google
- **Step 8:** Admin can mark as COMPLETED in the dashboard

6.2 Configuration (CMS-Editable)

Setting	Content Block Key	Default Value
Google Reviews Link	reviews.googleLink	https://g.page/r/GURUVAYUR_DHAM/review
Funnel Enabled	reviews.funnelEnabled	true
Hours After Checkout	reviews.funnelHours	2

6.3 Technical Details

- **Cron schedule:** 7:30 AM UTC daily (= 1:00 PM IST, 2 hours after 11 AM checkout)
- **Dry run mode:** ?dryRun=1 returns what would be sent without actually sending
- **Idempotency:** Checks for existing ReviewRequest before sending (prevents duplicates)
- **Fallback:** If WhatsApp API env vars are not set, requests are queued (status: PENDING) for manual send
- **Logging:** All sends logged in the Notifications table with booking reference

7. SEO & Structured Data

The platform is built with SEO as a first-class priority. Every page has optimized meta tags, JSON-LD structured data, semantic HTML, and fast load times. The 13 SEO landing pages alone target an estimated 750,000+ monthly searches across festivals, hotel-near queries, and darshan timing guides.

7.1 JSON-LD Structured Data

Google uses structured data to understand page content and display rich results (star ratings, event dates, FAQ accordions, etc.). The platform injects the following schemas:

Schema Type	Where Used	Rich Result
Hotel (LodgingBusiness)	Server-rendered in layout head	Knowledge panel, hotel info card
WebSite (with SearchAction)	Server-rendered in layout head	Sitelinks search box
Organization	Server-rendered in layout head	Knowledge panel, social profiles
Event	Festival pages (Janmashtami, Holi, Diwali, Radhashtami, Kartik Purnima)	Event rich results with dates
TouristAttraction	Hotels-near pages + darshan timing pages	Attraction info in search results
FAQPage	FAQ page + every SEO landing page (13 pages x 5 FAQs)	Expandable FAQ snippets in search results
Article	Blog post detail pages	Article rich results with author + date

7.2 Dynamic Sitemap

The platform generates a dynamic sitemap.xml at /sitemap.xml that includes:

- **9 static SPA routes** - Home, Rooms, Pooja, About, Gallery, Events, Blog, FAQ, Contact
- **13 SEO landing pages** - All festival, hotels-near, and darshan-timing pages
- **Dynamic blog post URLs** - Every published BlogPost with lastmod from updatedAt
- **Priorities** - Home (1.0), SEO pages (0.8-0.9), blog posts (0.7), FAQ/Gallery (0.6)
- **Change frequency** - Daily for home/blog, weekly for rooms/events, monthly for FAQ/gallery

7.3 Robots.txt

A dynamic robots.txt at /robots.txt allows all major bots (Googlebot, Bingbot, Twitterbot, Facebook) to crawl public content while blocking admin, API, booking, login, kitchen, CMS, and settings routes. It also points to the sitemap location.

7.4 Meta Tags & Open Graph

- **Title tags** - Template-based: "Page Name | Guruvayur Dham"
- **Meta descriptions** - 120-160 characters, optimized for each page
- **Keywords** - 12 targeted keywords in layout metadata
- **Open Graph** - og:title, og:description, og:image (1200x630), og:locale (en_IN)
- **Twitter Cards** - summary_large_image with title, description, and image
- **Canonical URLs** - Set in layout metadata
- **Robots meta** - index: true, follow: true, max-image-preview: large

7.5 SEO Audit Tool

The platform includes a built-in SEO audit tool at /admin/settings that performs real checks on the live site. Unlike the previous version (which awarded fake 100/100 scores), the current audit:

- Fetches the base URL and runs real HTML checks (title, meta, H1, schema, canonical, OG, images, alt text, word count)
- Checks /sitemap.xml, /robots.txt, and /manifest.json existence and size
- For each SPA hash route, saves the base HTML score plus a section-specific recommendation
- Surfaces per-page expandable issue lists in the admin UI (not just score numbers)
- Pings Google and Bing with the sitemap URL after each audit

8. Multilingual Support (i18n)

The platform supports 5 languages: English, Hindi, Marathi, Gujarati, and Malayalam. A language selector in the navbar allows instant switching, and all page content (not just navigation labels) translates automatically. The system uses a three-layer translation approach: CMS admin-curated translations, built-in translation file, and hardcoded fallbacks.

8.1 How Language Switching Works

The `useContent()` hook integrates with the i18n system. When resolving a content block, it checks in order:

- **Layer 1: Admin-curated translation** - Checks for a DB content block with the key suffix `__lang` (e.g., `hero.headline__hi`). If the admin has translated a block to Hindi, this wins.
- **Layer 2: Default DB block** - Checks the default-language content block (e.g., `hero.headline`). For English, this is the final answer. For other languages, it prefers the built-in translation if one exists.
- **Layer 3: Built-in translation file** - Checks `translations.ts` for the current language (e.g., `t("hero.headline")` in Hindi returns the Hindi translation).
- **Layer 4: Hardcoded fallback** - Uses the fallback string passed to the `get()` function.

8.2 Translated Content

Content Area	Keys Translated	All 5 Languages?
Navigation	nav.home, nav.rooms, nav.pooja, etc. (12 keys)	Yes
Hero section	hero.eyebrow, hero.headline, hero.subheadline (4 keys)	Yes
Why Choose Us	whyChooseUs.eyebrow, title, subtitle (3 keys)	Yes
Rooms section	rooms.eyebrow, title, subtitle (3 keys)	Yes
Pooja section	pooja.eyebrow, title, subtitle (3 keys)	Yes
About section	about.eyebrow, title, story (3 keys, including 3-paragraph story)	Yes
Contact section	contact.eyebrow, title, subtitle (3 keys)	Yes
Events section	events.eyebrow, title, subtitle (3 keys)	Yes
Blog section	blog.eyebrow, title, subtitle (3 keys)	Yes
Testimonials	testimonials.eyebrow, title, subtitle (3 keys)	Yes
FAQ section	faq.eyebrow, title, subtitle (3 keys)	Yes
Gallery section	gallery.eyebrow, title, subtitle (3 keys)	Yes
Darshan section	darshan.eyebrow, title, subtitle (3 keys)	Yes
Footer	footer.ctaHeadline, ctaSubtitle, tagline, quickLinks, etc. (8 keys)	Yes
Common/CTA	cta.bookNow, cta.call, common.checkIn, etc. (15 keys)	Yes
Login page	login.welcome, signIn, createAccount, etc. (15 keys)	Yes
Booking flow	booking.title, step1, step2, etc. (8 keys)	Yes

9. Deployment & Infrastructure

The platform is designed for dual deployment: Vercel (current production) and any VPS via Docker (future migration). Both paths are fully supported with zero code changes. The VPS setup includes auto-HTTPS via Caddy, PostgreSQL in a container, and a dedicated cron container for the review funnel.

9.1 Vercel Deployment (Current)

- **Auto-deploy** from GitHub main branch on every push
- **Build command:** next build (with postinstall: prisma generate)
- **Environment variables:** DATABASE_URL, NEXTAUTH_SECRET, RAZORPAY_*, WHATSAPP_*, etc.
- **Cron job:** Daily at 7:30 AM UTC for review funnel (Vercel Cron via vercel.json)
- **Image storage:** Vercel Blob (requires BLOB_READ_WRITE_TOKEN) or local fallback
- **Health check:** /api/health endpoint for uptime monitoring

9.2 VPS Deployment (Docker)

The platform is fully VPS-ready with a complete Docker setup. A single deploy.sh script handles all operations: build, deploy, migrate, seed, backup, restore, logs, and status.

Service	Container	Purpose
PostgreSQL 16	guruvayur-postgres	Database (persistent volume)
Next.js App	guruvayur-app	Web server (standalone build, non-root user)
Caddy 2	guruvayur-caddy	Reverse proxy + auto HTTPS (Let's Encrypt)
Cron	guruvayur-cron	Review funnel (runs every 15 min in a loop)

9.3 Deploy Script Commands

Command	Action
./deploy.sh	Full deploy (git pull, build, restart, migrate, seed)
./deploy.sh quick	Quick restart (no rebuild)
./deploy.sh build	Build only (no start)
./deploy.sh logs	Tail app logs
./deploy.sh stop	Stop all services
./deploy.sh db	Apply database schema changes (prisma db push)
./deploy.sh seed	Run seed scripts
./deploy.sh funnel	Test the review funnel (dry run)
./deploy.sh status	Show service status + disk usage
./deploy.sh backup	Backup database to backup-YYYYMMDD-HHMMSS.sql.gz
./deploy.sh restore	Restore database from a backup file

10. Admin & Operations Dashboard

The platform includes a comprehensive admin dashboard for hotel staff. Accessible at `/#/admin`, it provides real-time visibility into bookings, availability, channel sync, reviews, housekeeping, kitchen orders, and more. Role-based access control supports GUEST, STAFF, and MANAGER roles.

10.1 Admin Pages

Page	Route	Purpose
Admin Dashboard	<code>/#/admin</code>	Overview: bookings, revenue, occupancy, recent activity
Admin Hub	<code>/#/admin/hub</code>	Central hub with quick links to all admin sections
Admin Bookings	<code>/#/admin/bookings</code>	All bookings with filters (status, source, date)
Admin Content	<code>/#/admin/content</code>	Content block editor (70+ fields, 16 categories)
Admin Rooms	<code>/#/admin/rooms</code>	Room management (prices, availability, inventory)
Admin Channels	<code>/#/admin/channels</code>	Channel partner config + sync logs
CMS Editor	<code>/#/cms</code>	Structured data editor (11 tabs: rooms, poojas, SEO pages, etc.)
Settings	<code>/#/settings</code>	Channel partner API keys + SEO audit tool

10.2 Authentication

- **Guest login** - Email/password, OTP (phone), or OAuth (Google, Facebook)
- **Staff login** - PIN or email/password (role: STAFF or MANAGER)
- **2FA support** - Two-factor authentication via TOTP
- **Password reset** - Email-based reset flow with secure tokens
- **Session management** - Persistent sessions with expiry
- **AdminGuard** - Route protection for all `/admin/*` routes

10.3 Operational Features

Feature	Description
Live Availability	Real-time room availability for 90 days, updated on every booking
Housekeeping Board	Room status tracking (dirty, cleaning, inspected, ready)
Kitchen Orders	In-room meal ordering system with order tracking
Night Audit	Daily reconciliation of bookings, revenue, and occupancy
Customer CRM	Guest profiles with booking history, loyalty points, preferences
Coupon Management	Create/track coupons with usage limits and validity windows
Festival Alerts	Automated alerts for upcoming festivals (surge pricing triggers)
Maintenance Blocks	Mark rooms as under maintenance with notes
Travel Agent Portal	Manage travel agent partnerships with commission tracking
Influencer Portal	Track influencer referrals with click analytics
Audit Log	All admin actions logged for accountability

11. PWA & Performance

The platform is a Progressive Web App (PWA) with offline support, push notifications, and add-to-home-screen capability. Performance is optimized for fast load times on mobile networks, which is critical for pilgrim users in areas with poor connectivity.

11.1 PWA Features

- **Service Worker** - Registered for offline caching of static assets
- **Web App Manifest** - Installable on Android/iOS with app icons
- **Push Notifications** - VAPID key support for web push (booking confirmations, festival alerts)
- **Add to Home Screen** - Prompt shown to returning visitors
- **Apple Touch Icons** - Optimized icons for iOS home screen
- **Maskable Icons** - Adaptive icons for Android
- **Theme Color** - #0F0A08 (matches the dark ink theme)

11.2 Performance Optimizations

- **Next.js standalone build** - Minimal server bundle, no unnecessary node_modules
- **Image optimization** - Next.js Image component with lazy loading and responsive sizes
- **Font optimization** - Variable fonts (Fraunces, Manrope) with display: swap
- **Code splitting** - Automatic route-based code splitting
- **Core Web Vitals** - LCP, FID, CLS tracked via PerformanceObserver
- **Analytics** - Custom event tracking (page views, bookings, CTA clicks)
- **Rate limiting** - API rate limiting to prevent abuse
- **Caching** - Static assets cached for 1 year (immutable), API responses cache: no-store

12. Security

The platform implements multiple layers of security to protect guest data, prevent abuse, and ensure reliable operation. All sensitive operations are server-side, and authentication is required for all admin and booking endpoints.

- **Authentication** - NextAuth with JWT sessions, OAuth (Google, Facebook), OTP, PIN
- **Authorization** - Role-based access control (GUEST, STAFF, MANAGER)
- **AdminGuard** - Server-side route protection for all /admin/* routes
- **Rate limiting** - API rate limiting (3 reviews/hour, booking limits per IP)
- **Input validation** - Zod schemas for all form inputs
- **SQL injection protection** - Prisma ORM with parameterized queries
- **XSS protection** - React automatic escaping, no dangerouslySetInnerHTML on user input
- **CSRF protection** - SameSite cookies for auth sessions
- **HTTPS enforcement** - Caddy auto-redirects HTTP to HTTPS
- **Security headers** - HSTS, X-Content-Type-Options, X-Frame-Options, Referrer-Policy
- **File upload validation** - Server-side file type + size validation (max 10MB)
- **Non-root Docker user** - App runs as nextjs:nodejs (UID 1001) in production

13. Future Roadmap

The platform is designed for continuous growth. The following features are recommended for the next phase of development, ranked by expected impact:

13.1 Phase 2 SEO Expansion

Page Type	Pages	Est. Monthly Searches
How to Reach guides	5 (Mathura, Delhi-Mathura, Agra-Mathura, Mathura-Vrindavan, Railway to Temples)	~75,000
Pooja-specific landing pages	4 (Palpayasam, Abhishek, Aarti, Annadan)	~14,000
Itinerary guides	4 (2-day, Vrindavan day trip, Braj circuit, temple tour)	~27,000
Distance/Route pages	4 (Mathura-Vrindavan, Delhi-Mathura, Mathura-Agra, Mathura-Gokul)	~34,000
Dress code + Best time	2 (Dress code, Best time to visit)	~11,000
Comparison/Listicle pages	3 (Top 10 temples, Mathura vs Vrindavan, Budget hotels)	~25,000

13.2 Feature Roadmap

Feature	Impact	Effort
Festival Surge Pricing	High (30-50% revenue increase during peaks)	Medium
Waitlist + Auto-Notify	High (captures lost bookings)	Medium
Group Booking Flow	High (large revenue source)	High
Pooja Calendar Booking	Medium (visual date picker for poojas)	Medium
Darshan Slot Reminders	Medium (adds value for first-time visitors)	Low
Pilgrim Itinerary Planner	Medium (shareable day-by-day plan)	High
Housekeeping Dashboard	Medium (saves 30+ min/day)	Medium
Real OTA API Integration	High (prevents double-bookings)	High

14. Summary

The Guruvayur Dham platform is a comprehensive, production-ready digital solution for a pilgrim hotel. It combines a beautiful, fast website with a powerful CMS, intelligent WhatsApp chatbot, automated review funnel, multi-channel booking sync, and 13 SEO-optimized landing pages targeting 750,000+ monthly searches.

The platform is deployed on Vercel with automatic deploys from GitHub, and is also fully VPS-ready with a complete Docker setup. All content is editable through the CMS without code changes, and the site supports 5 languages for pilgrims from across India.

14.1 Key Metrics

Metric	Value
Total Pages	23+
SEO Landing Pages	13
Total SEO Content	11,108 words
Estimated Monthly Search Reach	750,000+
Languages	5
CMS Content Blocks	70+
API Endpoints	50+
Database Models	40+
JSON-LD Schemas	7 types (Hotel, WebSite, Organization, Event, TouristAttraction, FAQPage, Article)
Deployment Targets	Vercel + any VPS (Docker)
PWA Ready	Yes (offline, push, installable)
Typecheck Errors	0

This document was generated on January 2026 and reflects the current state of the platform. For the latest features and updates, visit the GitHub repository at github.com/ayanalidar/guruvayur-dham.
